ACTIVITY BASED LEARNING

1. Instructional Methods Employed

S.No.	Instructional Method	Description / Usage	Evidence / Proof
1	Chalk & Talk	Traditional teaching for fundamentals	Class notes, timetable
2	ICT-enabled Teaching	PowerPoint, animations, videos	Screenshots, lecture PPTs
3	Flipped Classroom	Pre-class videos & in-class problem-solving	Moodle/NPTEL link
4	Problem-Based Learning (PBL)	Real-life problems given as assignments	Sample problem sheet
5	Gamification	Quizzes (Kahoot!, SkillRack, coding challenges)	Quiz reports, screenshots
6	MOOCs / Online Platforms	NPTEL, Coursera, Infosys Springboard, Udemy, Great Learning, EDUBCA	Completion certificates
7	Project-Based Learning	Mini & Major projects	Project reports, presentation slides
8	Case Studies & Group Discussions	Industry-oriented cases	Case study sheets, discussion photos
9	Experiential Learning	Labs, Industrial Visits, Internships	Lab reports, photos, certificates
10	Peer-to-Peer & Collaborative Learning	Student seminars, team projects	Seminar schedules, presentation PDFs

Table 1: Pedagogical Approaches

2. Pedagogical Approaches

- Traditional Pedagogy:** Lecture-based teaching, chalk-and-talk, teacher-centered focus.
- Learner-Centered Pedagogy:** Interactive sessions, Q&A discussions, role-plays, case studies.
- Technology-Enabled Pedagogy:** LMS, Flipped classroom, Virtual labs, MOOCs (NPTEL, Coursera, Infosys Springboard, Udemy), AI-based tools.
- Outcome-Based Pedagogy:** Focus on COs and POs, CO-PO mapping, internal and formative assessments.
- Activity-Based Pedagogy:** Group discussions, seminars, debates, hands-on experiments, mini-projects, hackathons, problem-solving tasks.
- Industry-Oriented Pedagogy:** Guest lectures, internships, industrial visits, value-added courses, project-based learning.

3. Teaching & Learning Tools

Platforms & Tools

Category	Tool / Framework	Purpose / Usage
Interactive Learning	Kahoot!, Quizizz etc	Quizzes, gamified assessments
Classroom Management	Google Classroom	Assignment organization, teacher-student interaction
LMS	College LMS, Roven	Course content delivery, assignments, grading
Writing & Plagiarism	Turnitin	Writing quality, plagiarism check
Online Teaching	Zoom, Microsoft Teams	Virtual classes, collaboration
Development & ML Tools	Google Colab, Weka	Programming, ML model training, data analysis

Tables 2. summarize teaching & learning tools

4. E-Resources

SL.NO	Resource	Description	URL
1	Science Direct	Engineering & CS e-journals	http://www.sciencedirect.com
2	DELNET	E-journals and e-books	http://delnet.nic.in
3	OPAC	Library catalog search	http://172.15.150.111:8080/AutoLib/opac.jsp
4	NPTEL	Online video courses	http://nptel.ac.in
5	NDLI	National Digital Library	https://ndli.iiitkgp.ac.in
6	Spoken Tutorial	IIT Bombay e-learning	http://spoken-tutorial.org
7	MOOC / Coursera / Khan Academy	Online courses and certifications	http://www.coursera.org

Table 3: lists major e-resources used by students.

5. Student Engagement & Activity-Based Learning

S.No.	Activity	Tool / Platform	Skills Developed
1	Project / Mini Project	MATLAB, Python, GitHub, Cloud Platforms	Design thinking, Coding, Innovation, Project management
2	Lab Activity	Virtual / Physical Lab, MATLAB	Hands-on coding, Debugging, Experimentation
3	Quiz	Kahoot, Quizizz, LMS	Quick recall, Concept reinforcement, Active engagement
4	Seminar / Concept Map	PowerPoint, Canva	Communication, Conceptual linking, Critical thinking
5	Debate / Role Play / Jigsaw	Classroom	Collaboration, Real-world simulation, Critical thinking, Public speaking
6	Cheat Sheet / Concept Map	Student-prepared, Notebook / Digital Notes	Quick revision, Analytical thinking, Knowledge summarization
7	Hackathon	Internal Hackathons, Smart India Hackathon	Coding under pressure, Teamwork, Innovation, Problem-solving
8	Survey / Assignment	Infosys Springboard, NPTEL, Parakh, Textbooks, Wipro TalentNext	Analytical thinking, Self-learning, Research, Technical writing
9	Case Study	Wipro TalentNext, NPTEL, Infosys Springboard, Research Papers	Problem-solving, Critical analysis, Application of theory to real-world problems
10	Poster / Web Design	Canva, Figma, HTML / CSS / JavaScript tools	Creativity, Technical presentation, Visual communication
11	Tutorial / Crossword / Smartphone Activity	LMS, Crossword Generators, Kahoot Quiz	Engagement, Fun learning, Reinforcement of key concepts
12	Scrapbook / Newspaper Clippings	Journals, Tech News Websites	Awareness of current trends, Research orientation, Documentation skills
13	Skit / Role Play	Classroom	Teamwork, Creativity, Communication, Real-life scenario understanding
14	Model Making	Lab Setup, DIY Materials	Visualization of concepts, Innovation, Practical implementation
15	Poster Presentation	Canva, MS PowerPoint, Chart Displays	Presentation skills, Creativity, Concept simplification
16	Concept Mapping	MindMeister, Draw.io, Miro Board	Logical organization, Knowledge linking, Analytical skills
17	Cross Word Puzzle	Crossword Generators, Google Forms	Engagement, Memory retention, Fun-based learning

18	QP Setting (Question Paper Setting)	Faculty-student co-creation	Higher-order thinking, Problem framing, Analytical evaluation
19	Skill Platforms	SkillRack, Pearson, Aptitude Buster	Placement readiness, Coding, Aptitude and logical reasoning skills
20	Advanced Platforms	MATLAB, Infosys Springboard, NPTEL, AWS, Wipro	Industry readiness, Research capability, Innovation and technical depth

Table 4 : Student Activities with Platforms and Learning Outcomes

Impact: Activity-Based Learning improves practical understanding, engagement, teamwork, and application of theoretical knowledge.

6. Student Certifications and MOOC Achievements

- **Coursera Campus License:** Guided assignments and certifications integrated with curriculum. It helped students in guiding projects
- **NPTEL / SWAYAM:** Certificates with Gold/Silver badges in Python, Java, Software Design.
- **Infosys Springboard:** Industry-relevant certifications (Software Engineering, Cloud Security).
- **Udemy / EDUCBA / Great Learning:** AI, Big Data, Database Administration, and Machine Learning courses.
- **Skill Platforms:** SkillRack, Pearson, Aptitude Buster for coding and placement readiness.
- **Other:** CISCO, AWS, SQL, Linux, Wipro Full-Stack Training, AICTE-Parakh assessments.

7. Impact Analysis

- Enhanced student engagement, critical thinking, and collaborative skills through activity-based and project-based learning.
- Improved conceptual understanding, programming, and research skills via e-resources and MOOCs.
- Outcome-Based Learning ensured consistent CO & PO attainment.
- Boosted industry readiness and employability through Coursera, Infosys Springboard, NPTEL, and other certification programs.

Instructional Methods and Their Effectiveness at SAEC

Our classrooms are spacious and well-equipped with whiteboards, projectors or smart boards with internet connectivity, and students are provided with Wi-Fi access whenever necessary. In three classrooms, multiple socket connections are available to enable students to charge their laptops and work effectively during sessions.

To make the teaching-learning process more engaging, faculty adopt various student-centric instructional methods such as project-based learning, case studies, problem-based assignments, seminars, role play, debates, and gamified activities including quizzes conducted through smartphones and interactive applications.

Faculty members continuously upgrade their skills through industry training programs offered by Wipro on Full Stack, .NET and Data Science, IBM-Kyndryl on AWS, Infosys Springboard on Generative AI and Software Development, and NASSCOM on various domains. This enables them to mentor students in industry-relevant areas and integrate emerging technologies into the curriculum delivery.

Students are also encouraged to pursue online learning opportunities such as MOOCs, NPTEL and Infosys Springboard courses under the guidance of trained faculty members. In addition, virtual labs such as Amrita Virtual Labs are introduced during LAN sessions to reinforce theoretical concepts with practical exposure.

The overall teaching-learning process is thus strengthened through a blended approach that integrates ICT-enabled teaching, industry-driven training, experiential learning, and gamification, ensuring effective knowledge transfer and active student participation. **Impact** is This holistic approach ensures effective knowledge transfer, improved employability skills, industry readiness, and active student engagement in the learning process.

INNOVATIVE ASSIGNMENT 3

Part A (20 marks)

No	Question	CO	PO
1.	Problem Statement A bank wants to conduct examinations for recruitment. You need to develop an application for the applicants to submit their details by implementing the classes based on the class diagram and description given below. ⊕ Applicant ⊕ name: String ⊕ jobProfile: String ⊕ age: int ⊕ getName(): String ⊕ setName(name: String): void ⊕ getJobProfile(): String ⊕ setJobProfile(jobProfile: String): void ⊕ getAge(): int ⊕ setAge(age: int): void ⊕ InvalidAgeException ⊕ InvalidAgeException(message: String) ⊕ InvalidJobProfileException ⊕ InvalidJobProfileException(message: String) ⊕ InvalidNameException ⊕ InvalidNameException(message: String) ⊕ Validator ⊕ validateName(name: String): boolean ⊕ validateJobProfile(jobProfile: String): boolean ⊕ validateAge(age: int): boolean ⊕ validateApplicant(applicant: Applicant): void	3	1,2,3,4,5

Note: The Applicant class is implemented and provided to you.

Validator

Method Description

validateName(String name)

- Validate that the name is not null or empty. If the name is null or empty, return false, else return true.

validateJobProfile(String jobProfile)

- Validate that the jobProfile is either 'Associate' or 'Clerk' or 'Executive' or 'Officer'. If the jobProfile is valid, return true, else return false. Perform case insensitive comparison.

validateAge(int age)

- Validate that the age is between 18 and 30 (both inclusive). If the age is valid, return true, else return false

validate(Applicant applicant)

- Validate the details of the applicant by calling the appropriate methods. If validation fails, throw user defined exceptions based on the below description.

Field violated	User defined exception	Exception message
name	InvalidNameException	Invalid name
jobProfile	InvalidJobProfileException	Invalid job profile
age	InvalidAgeException	Invalid age

Implement the required user defined exception classes.

Test the functionalities using the main method of the provided Tester class based on the below description.

- Create an object of Applicant class and set the values of all the instance variables
- Validate the details of the applicant by invoking the validate() method of the Validator class
- If all the details are valid, display 'Application submitted successfully!', else display appropriate error message

Sample Input and Output

Input

Instance Variables	Values
name	Jenny
jobProfile	Clerk
age	25

Output

Application submitted successfully!

Input

Instance Variables	Values
name	null
jobProfile	clerk
age	27

Output

Invalid name

Input

Instance Variables	Values
name	Jenny
jobProfile	Assistant
age	25

Output

Invalid job profile

Note: Questions from Infosys springboard

2	Scenario: Two threads are supposed to print two different sets of numbers (say, multiples of 5 and multiples of 100). The requirement is that first all multiples of 5 are printed in ascending order, and only after that, the second thread prints its multiples of 100. Threads may otherwise interleave unpredictably. Task: Write/design a solution using Java multithreading APIs (synchronized, wait/notify, locks, etc.) so that the output always respects the required order. <i>Note: Questions from Nptel</i>	3	1,2,3,4,5
---	---	---	-----------

Part A	Excellent(4-5)	Good(3)	Fair(2)	Poor(1)
Understanding of Exception & Synchronization Mechanism Concept	5			
Identification of Problem in Case Study	4+1			
Code Implementation, Syntax & Code Quality	5			
Correctness of Output Logic		3		

Marks (out of 10): 18/20 = 9/10

Faculty signature with date :

Signature
24.9.25

Goal:

Create a system to validate applicant details like name, job profile, and age. If any detail is invalid, throw a custom exception.

Explanation:

Applicant Class: Already given. It has more name, jobProfile, and age.

Validator Class: Checks if each field is valid.

Custom Exception:

- InvalidNameException: if name is null or empty.
- InvalidJobProfileException: if jobProfile is not one of the allowed values.
- InvalidAgeException: if age is not between 18 and 30

Code:

Custom Exception:

```
class InvalidNameException extends Exception {  
    public InvalidNameException(String msg) {  
        super(msg);  
    }  
}
```

```
class InvalidJobProfileException extends Exception {  
    public InvalidJobProfileException(String msg) {  
        super(msg);  
    }  
}
```

```
Class InvalidAgeException extends Exception {  
    public InvalidAgeException(String msg) {  
        super(msg);  
    }  
}
```

Validator Class:

```
Class Validator {
```

```
    public boolean validateName (String name) {  
        return name != null && !name.trim().isEmpty();  
    }
```

```
    public boolean validateJobProfile (String jobProfile) {
```

```
        String[]
```

```
for String[] validProfiles validateProfile = {"Associate", "Clerk",  
                                                "Officer"};
```

```
        for (String profile : validProfiles) {
```

```
            if (profile.equalsIgnoreCase(jobProfile)) return
```

```
        }  
        return false;
```

```
    public boolean validateAge (int age) {  
        return age >= 18 && age <= 30;
```

```
    public void validate (Applicant applicant) throws
```

```
        if (!validateName (applicant.getName())) {
```

```
            throw new InvalidNameException ("Invalid
```

```
        }  
        if (!validateJobProfile (applicant.getJobProfile())) {  
            throw new InvalidJobProfileException ("Invalid job
```

```

    if (!validateAge (applicant, getAge())) {
        throw new InvalidAgeException ("Invalid age");
    }
}
}

```

Tester Class:

```

public class Tester {
    public static void main (String[] args) {
        Applicant applicant = new Applicant ();
        applicant.setName ("Jerry");
        applicant.setJobProfile ("clerk");
        applicant.setAge (25);
        Validator validator = new Validator ();

        try {
            validator.validate (applicant);
            System.out.println ("Application Submitted successfully!");
        } catch (Exception e) {
            System.out.println (e.getMessage());
        }
    }
}

```

Output :

Valid Input:

Application Submitted successfully!

Invalid Name:

Invalid Job Profile:

Invalid job profile.

2.

Goal:

Use two threads:

→ Thread 1 prints multiples of 5

→ Thread 2 prints multiples of 100.

→ Thread 2 prints wait until Thread 1 finishes

Explanation:

We use `synchronized`, `wait()`, and `notify()` to control the order.

→ Thread 2 waits using `wait()` until Thread 1

→ Thread 1 calls `notify()` to wake up Thread 2.

Code:

```
class NumberPrinter {
```

```
    private boolean isFirstDone = false;
```

```
    public synchronized void printMultiplesOf5(int limit) {
```

```
        for (int i = 5; i <= limit; i += 5) {
```

```
            System.out.println("Thread-1: " + i);
```

```
        }
```

```
        isFirstDone = true;
```

```
        notify();
```

```
    }
```

```
    public synchronized
```

```

try {
    wait();
} catch (InterruptedException e) {
    Thread.currentThread().interrupt();
}

```

```

for (int i = 100; i <= limit; i += 100) {
    System.out.println("Thread-2:" + i);
}

```

```

public class ThreadOrderControl {
    public static void main (String[] args) {
        NumberPrinter printer = new NumberPrinter();
        Thread t1 = new Thread() -> printer.printMultiplesOf 5 (50);
        Thread t2 = new Thread() -> printer.printMultiplesOf 100 (500);
        t2.start();
        t1.start();
    }
}

```

OUTPUT:

```

Thread-1: 5
Thread-1: 10
...
Thread-1: 50
Thread-2: 100
Thread-2: 200
...
Thread-2: 500.

```

SUBJECT: IT3301/OBJECT ORIENTED PROGRAMMING
CLASS/SEM: II CSE /III
ASSIGNMENT II

Regno: 111924CS01146

Name : P. Maheswaran

Year & Section: II & III

Date of submission: 11.8.25

Marks : 20

ASSIGNMENT I

Part A (10 marks)

1. A) Write a simple Vehicle class that has fields for (at least) current speed, current direction in degrees, and owner name. Add a static field to your Vehicle class to hold the next vehicle identification number, and a non-static field to the Vehicle class to hold each car's ID number. Add two constructors to Vehicle: a no-arg constructor and one that takes an initial owner's name. Add a changeSpeed method that changes the current speed of the vehicle to a passed-in value and add a stop method that sets the speed to zero. Create an extended class called PassengerVehicle to add a capability for counting the number of seats available in the car and the number currently occupied. Provide a main method in PassengerVehicle to create a few of these objects and print them out.

(or)

(B) Write a simple Vehicle class that has fields for (at least) current speed, current direction in degrees, and owner name. Add a static field to your Vehicle class to hold the next vehicle identification number, and a non-static field to the Vehicle class to hold each car's ID number. Add two constructors to Vehicle: a no-arg constructor and one that takes an initial owner's name. Add a changeSpeed method that changes the current speed of the vehicle to a passed-in value and add a stop method that sets the speed to zero. Change Vehicle so that it has an EnergySource object reference, which is associated with the Vehicle in its constructor. EnergySource must be an abstract class, because a GasTank object's measure of fullness will differ from that of a Battery object. Put an abstract empty method in EnergySource and implement it in GasTank and Battery classes. Add a start method to Vehicle that ensures that the energy source isn't empty.

Part B (10 marks)

Across

2. Hiding internal details and showing functionality is

Across:

6. Any entity that has state and behaviour is known as

9. The is accessible everywhere

11. When one task is performed by different ways known as

14. keyword Used in a class declaration to specify the superclass; used in an interface declaration to specify one or more super interfaces.

15. When one object acquires all the properties and behaviours of parent object known as

16. can be used to refer immediate parent class instance variable or method.

17. Binding (or wrapping) code and data together into a single unit is known as

19. The is accessible only within package

Down

1. Java automatically frees the used memory for other uses

3. class which is the superclass of all classes
4. is a special type of method that is used to initialize the object.
5. keyword Included in a class declaration to specify one or more interfaces that are used by the current class.
7. Collection of objects is called . It is a logical entity.
8. is a group of similar types of classes, interfaces, and sub- packages.
10. the is accessible within a package and outside the package but through inheritance only
- 12 keyword is used to apply restrictions on class, method, and variable.
13. The is accessible only within class
18. Classes maintain one copy of class variables regardless of how many instances exist of that

class.

Case study: Trend Impact Analysis for Redesigning Urban Mobility Post-Pandemic scenario

To use Trend Impact Analysis (TIA) within the Design Thinking process to redesign the urban commuting experience for a metropolitan city, taking into account post-pandemic behavioural shifts, emerging technologies, and environmental goals.

Step 1: Empathize (Understanding users and context)

* User groups:

Daily commuters, IT employees, gig economy workers, students, elderly travelers.

* Post-pandemic behavioural shifts:

- * Preference for contactless travel & digital payments.
- * Increased demand for shared yet safe transport.
- * More people walking/cycling for short distance
- * Rise of remote work, reducing peak-hour

crowding.

* Pain points:

- * Traffic congestion - loss of time
- * High pollution - health concerns.

Step 2: Define (Problem statement)

"How might we redesign Bengaluru's urban commuting experience by integrating emerging trends, post-pandemic behavioural shift, and sustainability goals, while ensuring

affordability, inclusivity, and safety for

Step 3: Trend Impact Analysis (TIA)

Current Trends Identified:

1. Contactless digital adoption → QR - codes
mobile apps.

2. Micro-mobility solutions → e-bikes,
bicycles.

3. Environmental goals - EV adoption, low
zones

Impact Analysis:

* Short-term (1-2 years):

Increase in EV cabs, contactless
app-based bookings.

* Medium-term (3-5 years):

Smart traffic system, large
of EV buses.

Step A: ...

buses, EV taxis, shared bikes

- * ~~between~~ mobility zones → dedicated cycle & e-scooter lanes
- * Dynamic pricing → Incentives for off peak travel.
- * Mobility -as-a-service (MaaS) → single subscription for multiple transport modes.

Step 5: Prototype:

- * Mobile app with real-time trip planning across multiple transport options.
- * Pilot project: EV shuttle + e-bikes in Electronic City / Whitefield IT hubs.
- * Digital kiosks at metro / bus stations for contactless ticketing.

Step 6:

- * Conduct user trials with commuters.
- * Gather feedback on ease of use, travel time, safety, and affordability.

Outcome:

- * Reduced congestion & pollution in Bengaluru.

- * Improved safety and inclusivity in mobile
- * A sustainable

Case study 2:

Designing a Healthcare Mobile App
Elderly Users Using Empathetic Design

Step 1: Empathize (Understanding Elderly Users).

* Challenges faced:

* Physical: Poor eyesight, shaky hands, typing speed.

* Cognitive: Memory loss, difficulty with complex steps.

* Emotional: Anxiety about technology, fear of making mistakes.

Healthcare needs:

* Easy doctor consultation booking.

* Medicine reminders and refill tracking.

* Simple emergency

Research Methods Used:

- * Interviews with elderly patients and caregivers.
- * Observation of app usage struggles.
- * Empathy mapping to capture needs and desires.

Step 2: Define (Problem Statement)

"How might we design a healthcare mobile app that enables elderly users to easily manage appointments, medications, and emergency needs, while reducing anxiety and increasing confidence in technology?"

Step 3: Ideate (Solution Concepts)

- * Large-text, high-contrast UI for visibility.
- * Voice commands for navigation.

Step 4: Prototype

- * Low-fidelity wireframes tested with elderly groups.
- * Key screens: Home, Appointments, Medicines, Emergency SOS.

Step 5: Test

- * Conduct usability testing with 20+ elderly users.
- * Metrics: Ease of navigation, error rate, emotional

comfort, task completion time.

dept: outcome

* Elderly users reported increased confidence in managing health.

* Reduction in missed medications & delayed doctor

prototyping as a decision-making tool:-

introduction:-

Prototyping is a dynamic and iterative process used in design and development to create early models of a product or system. It allows stakeholders and team members to visualize, interact with, and evaluate ideas before final implementation.

> purpose of prototyping:

- Idea validation: Helps confirm whether the proposed solution meets user needs.
- Feedback collection: Encourages constructive input from stakeholders.
- Conflict prevention: Reduces misunderstandings and misalignments by making abstract ideas tangible.

> Application in Decision-Making.

At the BT1-4 level, learners are expected to apply knowledge to real-world scenarios.

Here's how prototyping supports

decision making:

1. comparative evaluation:

- Multiple prototypes can be developed different approaches.
- stakeholders can compare usability and effectiveness
- Example: A team designing a mobile prototype two ui layouts to determine offers better user experience

2. stakeholder engagement:

- Prototypes serve as communication bridging gaps between technical teams and technical stakeholders.
- early involvement fosters ownership consensus
- Example: A Healthcare dashboard.

3. Risk mitigation:

- Identifies design flaws and technical easily.
- Saves time and resources by avoiding revision later

4. Iterative Refinement:

- Feedback from each prototype iteration
- the next
- encourages continuous

> Decision Times : choosing the best path :
once prototypes are evaluated.

- Data - Driven Decision : use feedback and performance metrics to guide choices
- consensus Building : Align team and stakeholder preferences
- finalization : select the most viable prototype for full - scale development.

conclusion :.

prototyping empowers teams to make informed , collaborate and confident decision by transforming ideas into tangible models it minimizes ambiguity , fosters innovation and ensures that the final product aligns with user expectations and business goals.

creativity techniques in the Ideation phase

The Ideation phase is all about generating a wide range of ideas for a defined problem. It encourages divergent thinking and collaboration. Here are some widely used techniques:

1. Brainstorming:

- Description: A group activity where participants rapidly generate ideas without judgement.
- Example: A team designing a fitness app brainstorms features like step tracking, reminders, and gamified challenges.

2. SCAMPER:

- Description: A checklist-based method for idea generation by modifying existing products or concepts.
- SCAMPER stands for: Substitute, Combine, Adapt, Modify, Put to another use, Eliminate, Reverse.
- Example:

For a reusable water bottle, use SCAMPER to:

- Substitute plastic with bamboo
- Combine with a built-in filter
- Adapt it for hot beverages

3. Role playing:

- Description: Team members act out scenarios to empathize with users and uncover new insights.
- Example: Designers play the role of elderly users trying to navigate a smart home interface.

4. Mind Mapping:

A visual technique that starts with a central idea and branches out into related concepts.

- Example: for travel app, the central node is "Travel planning", "Destinations", "packing", and "local experiences".

5. Rapid prototyping:

Quickly building low-fidelity models to explore ideas and gather feedback.

Sketching wireframes of a new e-commerce checkout flow to test user reactions.

6. crazy 8s :

A fast sketching exercise where you draw 8 ideas in 8 minutes.

A team re designing a food delivery app sketches 8 different home screen layouts to explore variety.

7. worst possible idea.

encourage intentionally bad ideas to break mental blocks and spark creativity

conclusion :-

These techniques help teams go beyond the obvious, challenge assumptions and generate innovative solutions. By combining multiple methods, the ideate phase becomes a powerful engine for creativity and collaboration.

	EXCELLENT (10-9)	GOOD (8-7)	FAIR (6-5)	POOR (4-0)
Understanding DS	Student's work shows complete understanding of problem and all requirements	Student's work shows understanding of problem and most requirements	Student's work shows slight understanding of problem and requirements	Student's work shows incomplete understanding of problem and/or requirements
Capability of writing Algorithm	Algorithms or procedures are written clearly.	Some of algorithms or procedures are written undoubtedly.	Few of algorithms or procedures are written clearly.	No algorithms or procedures are written.
Capability of writing Program	Programs are written precisely based on the question.	Programs are written accurately with some errors.	Major errors in program writing.	Programs are not written/wrong program written
Completion of target (Timeliness)	Assignment received in due date	Assignment received 1 or 2 days later	Assignment received 3 days later	Assignment received 4-5 days later

Write an algorithm and program that reads a list of 100 random integers in the range 1 to 200, function the user and create a linked list and array. Display the list and array. Compare linked list and linear arrays, analyze their advantages and disadvantages and justify your preference for one data structure over the other in this programming scenario.

Algorithm to create a linked list and an array from user input:

Input:

Step by step Algorithm.

Input:

Read 100 random integers from the user in the range 1 to 200.

Creating an array:

- * Initialize an empty array of size 100
- * Store each input integer in the array.

Creating a linked list:

Define a Node class with two attributes: data (to store the integer) and next (to store the reference to the next node)

Initialize the head of the linked list as NULL

For each input integer, create a new node and append it to the end of list.

Comparison:

compare the linked list and the array
form of:

Memory usage

Access time

Insertion and deletion time

Use cases.

Program:

```
#include <stdio.h>
```

```
#include <stdlib.h>
```

```
// Define the Node structure for the linked list
```

```
struct Node
```

```
{
```

```
int data;
```

```
struct Node * next;
```

```
};
```

```
// Function to create a new node
```

```
struct Node * create_node (int data)
```

```
{
```

```
struct Node * new_node = (struct Node *) malloc(sizeof
```

```
struct Node)
```

```
new_node -> data = data;
```

```
new_node -> next = NULL;
```

```
return new_node;
```

```
}
```

```
// Function to create a new node at the end
```

```
struct Node* append - node (struct Node* head, int data)
```

```
{  
    if (head == NULL)
```

```
{  
        return create - node (data);
```

```
    }  
    else
```

```
{  
        struct Node* current = head;
```

```
        while (current -> next)
```

```
{  
            current = current -> next;
```

```
        }  
        current -> next = create -> node (data);
```

```
    }  
    return head;
```

```
    }  
    // function to print the linked list
```

```
void print - linked - list (struct Node* head)
```

```
{  
    while (current)
```

```
{  
        printf ("%d ", current -> data);
```

```
        current = current -> next;
```

```
    }  
    printf ("\n");
```

```
    }  
    // function to print the array
```

```
void print - array (int arr [], int size)
```

```
{  
    for (int i = 0; i < size; i++)
```

```
{
```

printf ("%d", arr[p]);

printf ("\n");

// Main function.

int main()

{
int random - integers [100];

struct Node * linked - list - head = NULL;

// seed the Random number generator (time ());

// Random 100 random integers in the range 1 to 100

for (int p=0; p<100 ; p++)

{
random - integers [p] = rand () % 200 + 1;

linked - list - head = append - node (linked - list -
random - integers [p]);

}

// Display the array

printf ("Array elements : \n");

printf - array (random - integers , 100);

// Display the linked list

printf ("List linked elements : \n");

printf - linked - list (linked - list - head);

return 0;

}

Comparison and Analysis:

Array:

- * Memory usages; Arrays require contiguous memory allocation, in this case, it will take memory for 100 integers.
- * Access times; Arrays provide $O(1)$ Access time for any elements using the index.
- * Insertion and Deletion time: Insertion and deletion in the middle of the array can be costly ($O(n)$) because elements need to be shifted.

Output:

Enter 100 random integers between 1 and 200.

Array:

123 45 67 89 150 34 78... (up to 100 integers)

Linked list:

123 → 45 → 67 → 89 → 150 → 34 → 78 → Null.

Comparison and Analysis:

Linked list:

Memory usage: Linked list we move memory due to storage of address pointer along with the data.

Access time: Time Linked list provide $O(n)$ access time because you have to traverse the list to reach our specific element.

* Insertion and Deletion time: Insertion and Deletion are generally O(1) if you have a reference to the node just before the node to be inserted/deleted. No need to shift elements.

* Use cases: Suitable for scenarios where insertion and deletion occurs, and data set dynamic.

Conclusion:

Performance Justification:

* In this programming scenario, the preference for one data structure over the other depends on the requirement.

Use array if:

* You need fast access to elements using an index.

* Insertion and deletion are infrequent.

Use linked list if:

You need to insert or delete element frequently.
The size of data set is dynamic.

For this specific case of storing 100 random integers, if you expect no further modification (insertions etc deletion) an array might be more efficient due to its fast access and simplicity.

Write an algorithm and program in C to create a doubly linked list of n nodes and display it in reverse order.

1. Define a Node Structure:

create a structure for the doubly linked list node containing data, next, and previous pointer.

2. Create a New Node:

Function to create a new node with given data and initialized pts pointers.

3. Insert Node at End:

Function to insert a new node at the end of the doubly linked list.

4. Count Node:

Function to count the number of nodes in the list by traversing from the head to the end.

5. Display in Reverse Order:

Function to display the list in reverse order by traversing from the end to the beginning.

6. Main function:

Read the number of nodes and store from the user.

- Insert the nodes into the list.
- Count and display the number of nodes.
- Display the list in reverse order.

Program:

```
#include <stdio.h>
```

```
#include <stdlib.h>
```

```
// Define the node structure
```

```
struct Node
```

```
{
```

```
    int data;
```

```
    struct Node * next;
```

```
    struct Node * prev;
```

```
};
```

```
// Function to create a new node
```

```
struct Node * createNode (int data)
```

```
{
```

```
    struct Node *
```

```
newnode = (struct Node *) malloc (size of struct
```

```
newnode -> data = data;
```

```
newnode -> next = NULL;
```

```
newnode -> prev = NULL;
```

```
return newnode;
```

```
}
```

// function to insert a node at the end of the list.

void insertend (struct Node ** head, int data)

{
 struct Node * newnode = CreateNode (data);

struct Node * temp = *head;

if (*head == NULL)

{
 *head = newnode;

return;

}
 while (temp->next != NULL)

{
 temp = temp->next;

}
 temp->next = newnode;

newnode->next = temp;

}
 int countNodes (struct Node * head)

{
 int count = 0;

struct Node * temp = head;

while (temp != NULL)

{
 count++;
 temp = temp->next;

}
 return count;

}

```

void display reverse (struct Node * head)
{
    struct Node * temp = head;
    if (head == NULL)
    {
        printf ("List is empty. \n");
        return;
    }
    while (temp->next != NULL)
    {
        temp = temp->next;
    }
    printf ("List in reverse order:");
    while (temp != NULL)
    {
        printf ("%d", temp->data);
        temp = temp->prev;
    }
    printf ("\n");
}

int main()
{
    struct Node * head = NULL;
    int n, data;
    printf ("Enter the number of nodes: ");
    scanf ("%d", &n);
    for (int i=0; i<n; i++)
    {

```

```

printf ("Enter data for node %d: ", p+1);
scanf ("%d", &data);
insertend (&head, data);
}
int count = countNodes(head);
printf ("Number of nodes in the list: %d\n", count);
displayReverse(head);
return 0;
}

```

1. Structure Definition:

Structure Node defines a node of the doubly linked list with data, next, and prev pointers.

2. Create Node function:

Create a new node with the given data and returns a pointer to it.

3. Insertend function:

Inserts a new node at the end of the list. If the list is empty, the new node becomes the head.

4. CountNodes function:

Counts and returns the number of nodes in the list by traversing from the head to the end.

5. DisplayReverse function:

Display the list in reverse order by first moving to the end of the list and then traversing backward using the prev pointer.

6. Main function:

Reads the number of nodes and inserts the nodes into the list from the user, inserts the nodes into the list, counts and display the number of nodes, and display the list in reverse order.

Output:

Enter the number of nodes : 5

Enter the data for node 1 : 10

Enter data for node 2 : 20

Enter data for node 3 : 30

Enter data for node 4 : 40

Enter data for node 5 : 50

Number of nodes in the list : 5

List in reverse order : 50 40 30 20 10.

Conceptual Mapping

Unit-1 : Linear Data Structure

- Lists -

Array list

Singly linked list

Structure: Node with next
Reference.

Time Access: $O(n)$

Insertion / Deletion: $O(1)$ if position known.

Doubly linked list

Structure: Nodes with next & previous reference

Access Time: $O(n)$

Insertion / Deletion: Similar to $O(1)$ if position known.

Linear linked list

Circular linked list

Structure: Nodes are a circle.

Access Time: $O(n)$

Deletion / Insertion: Similar to singly or doubly linked list

INHERITANCE, INTERFACES & I/O

INHERITANCE

- Super Class & Sub Class
- Superclass = base class
- Subclass = derived class (inherits fields & methods)

- Types of Inheritance
 - Single, Multilevel, Hierarchical, Multiple (via interfaces), Hybrid

- Access Modifiers
 - Public → accessible everywhere
 - Protected → accessible in same package + subclasses
 - Private → within same class only

INTERFACES

- Definition → Blueprint of class, only method signatures + constants
 - Features
 - Implicitly public, abstract methods
 - Variables are public, static, final

- Implementation
 - class MyClass implements MyInterface
 - Differences: Class vs Interface
 - Class → data + methods, supports inheritance
 - Interface → only method declarations, supports multiple inheritance

- Extending Interfaces
 - interface B extends A
 - Inner Classes
 - Member inner class
 - Static inner class
 - Local inner class
 - Anonymous inner class

INPUT / OUTPUT (I/O) BASICS

- Streams (data flow)
- Byte Streams → read/write 8-bit data (InputStream, OutputStream)
- Character Streams → read/write characters (Reader, Writer)

- Console I/O
 - System.in → input stream
 - System.out → standard output
 - System.err → error output

- File I/O
 - FileInputStream, FileOutputStream (binary data)
 - FileReader, FileWriter (character data)
 - BufferedReader, BufferedWriter for efficiency

The Need for Design:

- Design is essential for solving complex problems in a **user-centered** way.
- It helps create solutions that are **desirable** (user-friendly), **feasible** (technically possible), and **viable** (economically sound).
- Design thinking encourages **innovation**, **creativity**, and **empathy** in product or service development.

Four Questions, Ten Tools

- These are guiding questions used during design thinking:
 - **What is?** (Understand the current situation)
 - **What if?** (Imagine possibilities)
 - **What wows?** (Find what resonates with users)
 - **What works?** (Test and refine)

Principles of Design Thinking

- **Human-Centered:** Focus on the user's needs and experiences.
- **Collaboration:** Cross-disciplinary teamwork is encouraged.
- **Experimentation:** Create quick, low-cost prototypes to test ideas.
- **Iteration:** Repeat steps to refine solutions.
- **Bias to Action:** Focus on doing rather than just thinking.

The Process of Design Thinking

This is usually a five-stage process:

1. **Empathize:** Understand users through observation and interviews.
2. **Define:** Clearly state the user's problem.
3. **Ideate:** Generate creative solutions.
4. **Prototype:** Build quick, testable versions of ideas.

DESIGN THINKING

Design Thinking – Introduction

Design Thinking is a creative, user-centered approach to problem-solving. It focuses on understanding the needs of users, exploring innovative ideas, and building practical solutions through collaboration and experimentation. The process typically includes stages like empathizing, defining, ideating, prototyping, and testing—all aimed at developing effective and meaningful solutions.

IT 3304 OBJECT ORIENTED PROGRAMMING

Link: <https://wayground.com/admin/reports/68c8353ef14cdd2c2e7c1825/players>

A quiz was conducted for the course IT3304 – Object Oriented Programming, covering Unit I to Unit III topics. The activity aimed to assess students' understanding of Java fundamentals, Object-Oriented concepts, inheritance principles, Exception and input output operations.

NDG

Dear Kamalee S,

Congratulations on completing the NDG Linux Unhatched course in the Cisco Networking Academy. This letter documents you have successfully completed the NDG Linux Unhatched course, which provides an introduction to the Linux command line. Linux is everywhere! As the reach of Linux continues to grow, knowledge of Linux is a core skill for all IT professionals. By completing this course, you have gained a better understanding of Linux.

If you decide to pursue additional knowledge of Linux consider:

NDG LINUX ESSENTIALS

This course is the perfect next step for beginners looking to expand their skills and knowledge of Linux. This full-semester course can be delivered as instructor-led training or as a self-paced learning experience. The NDG Linux Essentials course is designed to prepare you for the Linux Professional Institute Linux Essentials Professional Development Certificate.

Again, congratulations and we wish you continued success!

Sincerely,
The NDG Team

NDG LINUX SERIES

This certification level series offers beginners more rigorous in-depth coverage. The NDG Introduction to Linux I and NDG Introduction to Linux II courses focus on the basic Linux system administration skills needed in preparation for the Linux Professional Institute LPIC-1 certification.

Overall Rating

★★★★★

Excellent

★★★★

Very Good

★★★

Good

Big Data

- You are a bright, able and an adept engineer.
- A little progress each day adds up to big results

★★

★★★★

Computer Networks

★★★★★

- You can be a highly proficient and a worthy engineer.
- Strong technical skills to create a powerful package.

Computer Organization And Architecture

★★★★★

Cryptography And Network Security

★★★★

- You can be an exceptional and a great engineer.
- You possess many skills that an ordinary engineer doesn't think of.

- You have an exceptional way of finding things and get them improved.
- You can be a hardworking engineer with the right attitude for project engineering.

Data Analytics

★★★

Data Warehousing And Mining

★★★★★

- You can be very skilled and dedicated engineer.
- Good technical and leadership skills.

- You are a very adaptive and talented engineer.
- Profound professional knowledge and always aims to learn and acquire more skills.

Databases

★★★★★

- You can be an expert and a highly skilled engineer and leader.
- Your technical and leadership skills are matchable with excellent people

Machine Learning

★★★★★

- You are technically strong.
- You are a norm and proficient engineer.

Mobile Computing

★★★★★

- Strong technical skills to create a powerful package.
- You can be an eager engineer who is willing to take on any new challenge.

Natural Language Processing

★★★★★

- You can be an eager engineer who is willing to take on any new challenge.
- You acquire the peak of understanding the utmost complex design and implementation issues at every s

Software Engineering

★★★★★

- Understands complicated issues, even when beyond your direct area of expertise.
- You can be a highly proficient and a worthy engineer.

Theory Of Computation

★★★★★

- You can be an insightful and thorough researcher and engineer.
- You can be an expert and a highly skilled engineer and leader.

3D Printing and Design

★★★

- An innovative and quick-witted engineer.
- You can be the best technical visionary.

Artificial Intelligence/ Machine Learning

★★★

- Losers quit when they're tired. Winners quit when they've won.
- You are well talented in your core skills

Cyber Security

★★★

- You can be very skilled and dedicated engineer.
- Highly skilled professional.

Data Science

★★★★★

- Profound professional knowledge and always aims to learn and acquire more skills.
- Combined with your dedication and outstanding technical insight give you the availability to deliver

Internet of Things (IoT)

★★★★★

- Your technical and leadership skills are matchable with excellent people
- You can be among the engineers who can do all the tasks effortlessly.

General Knowledge Aptitude

★★★★★

- You can be an eager engineer who is willing to take on any new challenge.
- You can be a highly proficient and a worthy engineer.

Mental Aptitude

★★★★★

- Even the greatest were beginners. Don't be afraid to take that first step.
- It's not about perfect. It's about effort.

Social Aptitude

★★★★★

- Keep going. Everything you need will come to you at the perfect time.
- Focus on your goal. Don't look in any direction but ahead.

Robotics

★★★★★

- Understands complicated issues, even when beyond your direct area of expertise.
- Profound professional knowledge and always aims to learn and acquire more skills.

Integrity Aptitude

★★★★★

- You possess the quality of never giving up in nay of the circumstance.
- You always get your work done on time.

Physical Aptitude

★★★★★

- You have ability to know when to seek help outside the organization.
- You have ability to completely accept all the responsibilities and meet deadlines.

Spiritual Aptitude

★★★★★

- You Resist unnecessary things in your life to be more professional and ethical.
- You are getting spiritually stronger to become a professionally ethical engineer.

being produced are also getting the *Black Knight* (1922) treatment with the Hollywood studios. [Theatergoers are told to see *The Black Knight* as a comedy, but the film is a faithful and moving re-interpretation of Malraux's last novel and a story is everywhere about the role of a star company for almost a decade of the 1930s in the life of Hollywood.]

As a result of the generalised belief that the government is corrupt there is a loss of trust in the integrity of the state. This has implications for the role of the state in the economy and the role of the state in the provision of social services. The state is seen as a corrupt institution and as a result of this the state is seen as a corrupt institution and as a result of this the state is seen as a corrupt institution.

Practical Example: Suppose a firm's long-run growth rate is 8% and the firm's short-run growth rate is 4%. If the firm's short-run growth rate is 4%, then the firm's long-run growth rate is 8%.

Learning Management System (LMS)

A Learning Management System (LMS) is a digital platform designed to enhance teaching and learning by providing a centralized hub for academic resources and interaction. It supports both students and faculty in organizing, accessing, and managing course-related materials efficiently.

Key features of the LMS include:

Centralized Academic Repository

Lecture notes, syllabus, reference materials, and multimedia content are stored in one place. Students can easily access updated course content anytime, reducing dependency on physical handouts.

Question Bank & Assessments

Faculty can upload question banks, past exam papers, and model questions. Online quizzes and tests can be conducted within the LMS, with options for instant automated grading or instructor evaluation.

Assignment Management

Students can submit assignments digitally through the portal. Faculty can track submissions, provide feedback, and grade online, ensuring transparency and timely evaluation.

Ease of Access

- The LMS can be accessed through the provided link:
172.15.150.161/login/index.php.
- Students can log in anytime, making learning flexible and location-independent.

Nodal Centre Approval Letter

Ref No: AMVLNC14081

Date: 23-01-2024

To
The Principal
S.A Engineering College
Poonamallee-Avadi Main Road, Thiruvetkadam Post,
Chennai - 600077

Dear Sir/Madam,

With reference to the Expression of Interest for a virtual lab nodal centre from S.A Engineering College, it gives us immense pleasure to designate your institute as a Nodal Center for Virtual Labs. Dr. R. Geetha

and Mrs. C. Lakshmi Priya has been nominated as the nodal coordinator from your institute. This approval is valid up to one year and is subject to the terms and conditions attached and any subsequent directives as issued by MoE.

We thank you again for your interest in the virtual lab project and appreciate your endeavor in the service of students community. Wishing you all the best!

Sincerely,

Prof. Krishnaswamy Achuthan
Principal Investigator,
Amrita Virtual Labs
Amrita Vishwa Vidyapeetham
